

Webinar: From Transcript to Insight  
An introduction to SALT

Marleen Westerveld, PhD

Thanks for coming along! This webinar will begin shortly.

The webinar will be recorded so it is accessible to others after the live session.

Please remember to turn off your camera and microphone.

Feel free to post your questions into the chat box. I will attempt to answer them at the end of the presentation.

**Follow me on Instagram for updates:**

[@dr.marleenwesterveld.slp](https://www.instagram.com/dr.marleenwesterveld.slp)

Marleen Westerveld, PhD

# From Transcript to Insight – An Introduction to SALT

# Overview

---

- Disclaimer
- Why LSA?
- What is SALT?
- SALT compared to SUGAR, CLAN, MIMO
- Choosing the sampling context
- A Case Study to demonstrate how to enter, code, and analyse a story retell sample
- Questions & Answers

# Why Language Sample Analysis? all depends on your clinical question...

1. To determine performance at word- and sentence-level?
  2. To determine performance at discourse level? Conversation, narration, expository, persuasion?
  3. To set goals for intervention?
  4. To assist in monitoring progress over time?
  5. To compare results to typical peers [at word-, sentence- and/or discourse level] to confirm/refute/complement standardized test results?
  6. To create performance reports for reporting back to family, teachers, other professionals?
-

# Why does LSA feel time consuming?

---

- Transcription – BUT now we have ASR!
- Utterance segmentation (~ affects MLU)
- ID bound morphemes (or check them)
- Identify repetitions, unfinished utterances, reformulations (i.e. mazes)
- Identify pauses (or not!)
- Identify errors at word- and sentence-level (or not – but is a sensitive indicator of language difficulties)
- And then there is analysis / interpretation

# Transcription: Automated Speech Recognition (ASR)

Try: <https://azure.microsoft.com/en-us/services/cognitive-services/speech-to-text/#features> or [www.otter.ai/](http://www.otter.ai/) or [www.rev.ai](http://www.rev.ai) or whisper

Or dictate the child's sample into: <https://dictation.io/speech>

*Or: Send to SALT*

*Or:* automatically transcribe using the freely available TalkBank Batchalign (either online or locally) – more later.

# Pitfalls of ASR

---

- May not be HIPAA compliant – client confidentiality
- Using Microsoft – does not identify mazes and fillers and often ‘corrects’ the grammar!
- Does not work well for transcripts that are difficult to understand (audio quality or intelligibility).

# A safe approach atm...

- I use Batchalign – locally with Whisper.ai - to create a CHAT file.
- Cheat-sheet for installation available or go to GitHub
- You then have 2 options
  - \* Use CLAN to tidy up the transcript
  - \* and/or convert the CHAT into a SALT 'friendly' file (txt) – [chat2txt.marleenwesterveld.com](http://chat2txt.marleenwesterveld.com)

# From Audio to Transcript

## Step 1: Batchalign

```
/Users/marleenwesterveld/Library/CloudStorage/GoogleDrive-m.westerveld@gmail.com/M...
*PAR0: you ready to go yeah okay .
%wor: you • ready • to • go • yeah • okay •
*PAR0: tell me a story about a time when you felt excited or really happy .
%wor: tell • me • a • story • about • a • time • when • you • felt • excited • or • really • happy •
*PAR0: &-um I was excited a few hours before my seventh birthday .
%wor: um • I • was • excited • a • few • hours • before • my • seventh • birthday •
*PAR0: your seventh birthday .
%wor: your • seventh • birthday •
*PAR0: because I was going to bella's Wonderland and that's like an illusion park I like illusions .
%wor: because • I • was • going • to • bella's • Wonderland • and • that's • like • an • illusion • park •
      I • like • illusions •
*PAR0: because how it like tricks your mind a lot .
%wor: because • how • it • like • tricks • your • mind • a • lot •
*PAR0: and how you can play around with it .
%wor: and • how • you • can • play • around • with • it •
*PAR0: a lot cool .
%wor: a • lot • cool •
*PAR0: went to an illusion park yeah .
%wor: went • to • an • illusion • park • yeah •
*PAR0: okay .
%wor: okay •
*PAR0: is there anything else you wanted to tell me about that &-um .
%wor: is • there • anything • else • you • wanted • to • tell • me • about • that • um •
*PAR0: no [I] no that's okay I'm nine .
%wor: no • no • that's • okay • I'm • nine •
*PAR0: now I don't really remember but I knew I loved it .
%wor: now • I • don't • really • remember • but • I • knew • I • loved • it •
*PAR0: yeah .
%wor: yeah •
```

## Step 2: Chat 2 TXT;

- Tidy up speaker ID
- Add prompts (Global TALES) (+lines)
- Add timelines (stop-start)
- Tidy up the mazes.

```
+ happy
E a few hours before.
E my seventh birthday your seventh birthday because I was going to bella's wonderland and.
E that's like an illusion park I like illusions because how it like tricks your mind a lot.
E and how you can play around with it.
E a lot cool.
E went to an illusion park yeah okay.
E is there anything else you wanted to tell me about that.
E (um).
E no.
E no that's okay.
E I'm nine.
E now I don't really remember but I knew I loved it.
E yeah no that's good I'm glad that you liked it.
E all right.
E tell me a story about a time when you felt worried or confused.
+ confused
E perhaps a time when lots of.
E things were happening.
E and you didn't know what to do (um).
E I would say (um).
E I was worried about the cycle load happened.
E (um) I was really worried because it can like (um).
E swept away like a lot of houses.
E and (um) I have lots of so much like memories in my house like.
E and I'm a bit scared of like really loud noises that like just scares you and yeah.
E you get a really loud noises yeah.
E and like really things that can like really destroy you.
E like destroy your memories like with like all the thunder and stuff like that (yeah) yeah
okay.
E all right.
E we move on to the next one.
E tell me a story about a time when you were really annoyed or angry.
+ annoy
```

## Let's move on to analysis tools / computer programs

---

### Several options:

- SALT
- CLAN
- SUGAR
- MiMo

# What is SALT?

## **Systematic Analysis of Language Transcripts (SALT) is software that:**

- standardizes the process of eliciting, transcribing, and analyzing language samples.
- includes a transcription editor, standard reports, quick snapshots and reference databases for comparison with typical peers.

*Available in English, Spanish and Turkish*

*Can handle L → R languages for simple analysis – MLU, NDW, Utterances.*

<https://www.saltsoftware.com/products/software>

# SALT Built-in Reference Databases [Benchmarks]

<https://www.saltsoftware.com/resources/databases>

## Databases of English-fluent Speakers

- Play
  - ages 2;8 - 5;8 (grades Pre-K and K)
- Conversation
  - ages 2;9 - 13;3 (grades Pre-K, K - 3, 5, 7)
- Narrative SSS (student selects story)
  - ages 5;2 - 13;3 (grades K - 3, 5, 7)
- Narrative Story Retell
  - based on 4 stories
  - ages 4;4 - 12;8 (grades Pre-K, K - 6)
- Expository
  - ages 10;7 - 18;9 (grades 5 - 7, 9 - 12)
- Persuasion
  - ages 12;10 - 18;9 (grades 9 - 12)

## Databases Contributed by Colleagues

- TNL2 Narrative Samples
  - narratives from TNL-2 (Gillam & Pearson, 2017)
  - ages 4;0 – 14;11
- TNL Narrative Samples
  - narratives from TNL (Gillam & Pearson, 2004)
  - ages 5;0 – 11;11
- New Zealand/Australia databases
  - conversation, personal narrative, story retell, and expository
  - ages 4;0 - 8;9
- ENNI
  - narratives from ENNI (Schneider, Dube & Hayward, 2005)
  - ages 4;0 - 10;0

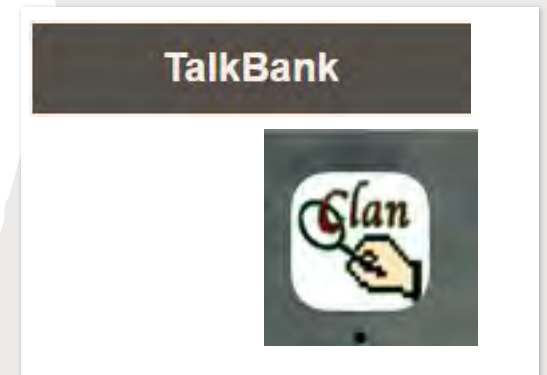

Hill et al.'s adolescent language samples: Expository, persuasion, recount, narrative (age 12 to 15)

# Let's compare SALT to....

CHAT and CLAN: <http://dali.talkbank.org/clan/>

- Computes LSA measures across 49 languages
- Requires 'coding' for repetitions, fillers, intelligible segments, abandoned utterances, grammatical errors – BUT ASR is getting good at this!
- Can automatically check/code morphology (in many languages)
- Can link to audio and/or video 😊
- Some published measures available for MLU, VocD, IPSync, DSS < 6 years (KIDEVAL).

# Let's compare SALT to....

## CHAT and CLAN:

*Currently, we should not compare anything other than adult-child play with a child under the age of 6 who speaks a mainstream dialect of English to the database. Note: Clinicians are advised to use KidEval reference values in conjunction with other language performance indicators (e.g., standardized test scores). A child's performance can also be benchmarked by prior research findings for individual LSA measures (such as MLU, NDW, etc.) summarized in the SLP Guide to CLAN Appendices for further information - <https://talkbank.org/0info/manuals/Clin-CLAN.pdf>*

## You can also calculate:

- Brown's morphemes
- You can use EVAL to look at adult language ability.
- Fluency

## Let's compare SALT to....

SUGAR: <https://www.sugarlanguage.org/> is a protocol- using MS Word.

Minimal coding required – although identification of morphemes is needed.

- Transcribers omit filler words, repetitions, and reformulations
- No procedures for error coding
- Comparison data available for 50 utterance *conversation* samples (3-7 years)
- But - conversation samples not the best context for assessing syntactic complexity

# Let's compare SALT to....

MiMo (minimal inputs, maximal outputs philosophy)

<https://mimolanguageanalysis.uk/>

- Grammar available for 65 mainly European languages
- Requires indication of speaker (CHI: or EXA: ) similar to CHAT.
- Perhaps save CHAT files to TXT files and upload directly.
- Or use the Chat2Txt converter [more later].
- Cool colour coding of lexical and syntactic classes
- You can compare [MLU-M and MLU, HDD and T~~X~~] to norms taken from CHILDES

MiMo

# Example MIMO output

line	speaker	sentence_coloured	Num Words	Num Morphs	num_clause	num_fin_clause	turn_length	Morph Complex Words
1	CHI:	An na was going out of the door .	7	9	1	1	7	going
2	CHI:	and he looked into the shops .	6	8	1	1	7	shops looked
3	CHI:	and him was crying .	4	5	1	1	7	crying
4	CHI:	And the police pat on his back .	7	7	0	0	7	
5	CHI:	and take her home .	4	4	1	1	7	
6	CHI:	and him got lost .	4	4	1	1	7	
7	CHI:	And the policeman said you do n't have to go out of ever again .	13	14	3	2	7	don't

Showing 1 to 7 of 7 entries

# So how long does it take? (50 utterances)

## SALT (5-15mins)

C Ana get/3s sad.  
C Does his[ep:he] get lost?  
; :05  
C His mum And dad come to fishing [eu].  
C (he) His brother say[ew] wanna play?  
C And look.  
; :04  
C Ana get/\*3s lost.  
C And which way will they go?  
C That way.  
C And never to a beach [eu].  
C She went to a beach.  
C X sad {crying sound}.  
C And he[ew] saw a policeman.  
C a policeman He said "you/'re Ana"?  
C Yes.  
C And yes.  
C X And \*the policeman took her home.  
C And \*he said to her "don't get lost".  
=C The end.  
E fantastic.  
- 01:10

## SUGAR (2-4 mins)

1. Use MS Word
2. Transcribe 50 utterances
3. Do not transcribe mazes
4. Divide into morphemes manually

## CLAN (5 – 11mins)

Automatic morpheme coding

```
@Begin
@Languages: en
@Participants: CHI Child, MOT Mother
@ID: en|TalkBank|CHI|2;10.15|||Target_Child|||
@ID: en|TalkBank|MOT||||Mother|||
@Media: samplefile, audio
@Options: CA
*MOT: what are you drawing? [b]
*CHI: a dog. [b]
%mor: det:a n:dog
*MOT: a big dog? [b]
*CHI: no, a little dog. [b]
@End
```

(Pezold et al., 2019)

## It all depends on your LSA questions...

- Types of measures you are interested in: MLU, NDW, Grammatical Errors, Rate, Verbal Fluency, Turntaking, Narrative quality etc.
- Depth of your planned analysis
- Age of your client
- Intelligibility
- Discourse context
- Describing and/or comparing to benchmarks.

## Using Computer Programs for Language Sample Analysis

Mollee J. Pezold,<sup>a</sup> Caitlin M. Imgrund,<sup>b</sup> and Holly L. Storkel<sup>a</sup>

# Comparison of database features

**Table 1.** Comparison database features across CLAN, SALT, and SUGAR.

Feature	Category	CLAN	SALT	SUGAR
Age	Early childhood	✓	✓	
	Preschool (3–5)	✓	✓	✓
	Early school age (up to 7)		✓	✓
	Later school age (8+)		✓	
Type of sample	Play	✓	✓	
	Conversation		✓	✓
	Narrative		✓	
	Expository		✓	
	Persuasion		✓	
Languages	English	✓	✓	✓
	Bilingual English/Spanish		✓	
	Spanish		✓	
Cost	Free	✓	US\$249	✓

*Note.* CLAN = Computerized Language Analysis; SALT = Systematic Analysis of Language Transcripts; SUGAR = Sampling Utterances and Grammatical Analysis Revised.

## Analysis features

Measures	CLAN	SALT	SUGAR
MLU (m)	yes	yes	yes
CPS		yes	yes
TTR	yes	yes	Yes 😊
Mazing		yes	x
Gramm. Acc		yes	
Examiner behaviour	Turns	yes	

# Worth noting:

Students with language disorders are not alike:

- a. **General developmental delay**- low mean length of utterance, number of different words, total words and words per minute.
- b. **Word finding and utterance formulation problems**- high number of repetitions and revisions at the word or phrase level.
- c. **Discourse difficulties** trouble maintaining topic, failure to respond to examiner questions.
- d. **Slow speaking rate**- low words per minute, high number of pauses
- e. **Fast speaking rate with low semantic content**- high words per minute with circumlocution and mazing.
- f. **“Disordered” language** - high percentage of errors and omissions.

Measures of fluency, narrative macrostructure, articulation and written language can also be obtained.

LSA, when done properly, is a “standardised assessment”.

# Choosing the elicitation context

---

## Depends on:

Child's ~ MLU [ $\geq 3$ ]

Child's intelligibility: 70-80%

Child's age

The reason for eliciting the sample

Child's context (home, school, community)

Child's / Family's goals

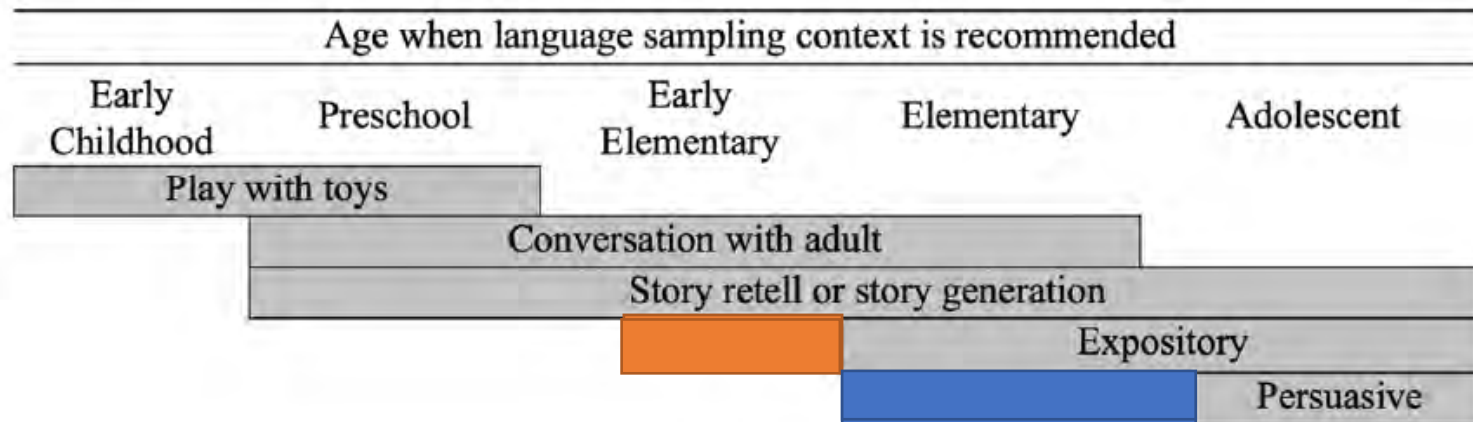

Planned analysis

Availability of 'norms' or benchmarks

# A rough guide

Figure 1. Recommended language sample contexts by age.

(Pezold et al., 2020)

## My suggestion

- Check why you want to do LSA.
- Do you have access to SALT?
- Do you want to compare to benchmarks?
- If so, check out the built-in reference databases as you cannot compare:

# Case study - Hugo

Age 5 years, 10 months

History of speech/language difficulties

History of SLP intervention

You elicit a language sample as part of your six-monthly intervention review process.

CELF-P2 results 

Hugo is in Prep; teacher has concerns about his participation in the classroom.

Word Structure:	SS 6
Expressive Vocabulary:	SS 9
Recalling Sentences:	SS 6
Sum of Expressive language scores:	SS 83

Basic Concepts:	SS 11
Concepts and Following Directions:	SS 5
Sentence Structure:	SS 8
Sum of Receptive language scores:	SS 89

# Decisions

## **Discourse context:**

- \* Age appropriate, relevant to curriculum:
- \* story retell and comprehension
  - \* Compared to benchmarks

## **Hypotheses / Questions**

- \* Difficulties with syntax/morphology in spoken discourse?
- \* Ability to tell a coherent story?
- \* Difficulties in story comprehension?

## **Measures:**

- \* MLU, Grammatical accuracy / errors,
  - \* Narrative Quality
- \* Narrative Comprehension

# SALT Built-in Reference Databases

# How to elicit the narrative?

Database Snapshot

STEP 1: Select database

Database Snapshot    Select Built-in Database    Select External Database    OK

Database Snapshot

Database: C:\ProgramData\SALT Software\SALT 20\Reference Databases\NZ-AU Story Retell.sltdb  
Context: Nar

GENERAL DESCRIPTION:

This database contains spoken language samples collected from New Zealand children, aged 4;0 - 7;7, and from Australian children, aged 5;3 - 8;9. The language samples were collected from the participants in a story retelling context using a story format and vocabulary that is familiar to children in New Zealand and Australia.

The initial data were collected in 2000/2001 from 4;6 to 7;7 year-old children who had been randomly selected from kindergartens and schools in Auckland, Hamilton, Christchurch (major urban areas in New Zealand) as well as secondary urban areas surrounding Christchurch. Approximately 80% of the participants were from the Auckland/Hamilton region to reflect New Zealand's population density in these areas. Children with diagnosed disabilities were excluded from the sample. The schools reflected a range of socio-economic areas and English was the first language of all children included in the database. There was an even gender distribution. The ethnicity of the group comprised of the following: New Zealand European: 62%, Maori: 22%, Pacific Island 5%, Asian 3%, Other 8%.

A second set of data was collected in November 2009 from 76 children aged 4;0 to 4;11. All children attended their local kindergarten in Christchurch, New Zealand. The kindergartens reflected a range of socio-economic areas and English was the first language of all children. There were 58% girls and 42% boys. Ethnic make-up of the group was as follows: NZ European 89%, Maori 8%, Pacific island 1.5%, Other 1.5%.

Two sets of samples were collected in Australia in 2012. The first set was based on the story "Ana Gets Lost". These samples were collected from 85 children (ages 5;5 to 7;7) attending the first two years of

Same amount of elapsed time - NOT AVAILABLE

Find Equated Samples    <-- Find the database samples equated by length

Tran1 (Child): CA = ---, 0 NTW, 0 C&I Verbal Utts

This will outline the procedures; provide transcription notes; give information about the database location etc.

## For Australia and NZ:

Ana Gets Lost: ages 4;0 – 7;7

Bus Story: Prep, Grade 1, Grade 2

# Retell: Ana Gets Lost (email me for a copy of the task)

- 0:00

E what happened in the beginning?

C Anna was going out of the door.

E uhuh.

C and he looked into the shops.

C and him was crying.

E uhuh.

C And the police pat on his back.

E uhuh.

C and take her home.

E uhuh.

C and him got lost.

C And the policeman said you don't have to go out of ever again.

- 1:20

**ONC:** Hugo obtained a story comprehension score of 1 (out of 8)

**ONQ:** Hugo scored 16 on the oral narrative quality rubric.

# What does this look like in SALT?

To view the demonstration video  
please visit YouTube:

<https://youtu.be/wx4WdN4PI0s>

1. Start a new transcript
2. Enter some details
3. Paste / Enter the transcript (only child utterances is fine)
4. Edit – identify roots (bound morphemes)
5. Code for grammatical errors
6. Check for entry errors in SALT
7. Run - analyze

- Inserting ONC and ONQ templates
- Scoring Oral Narrative Quality

Characteristic	Content
<b>Introduction</b>	<i>Stay at home/ couldn't go Parents go out Ana is sick Brother looks after her</i>
<b>Theme</b>	<i>Gets lost</i>
<b>Main Character</b>	<i>Ana</i>
<b>Supporting Character/s</b>	<i>Mum and dad big brother or (big) Brother Tom A Policeman</i>
<b>Conflict</b>	<i><u>Bored</u>. Includes <u>rationale</u> for character's behaviour. Ana goes out to find her parents <u>because</u> she is bored. Provides the relationship connecting events and actions.</i>
<b>Coherence</b>	<i>Critical Events: o Parents have gone out. o Leaves the house to look for mum and dad. o Gets lost /or/ not know what to do and cry o Policeman finds her o Policeman takes her home</i>
<b>Resolution</b>	<i>Resolutions: Home (safely) Parents happy OR Parents thank the police.</i>
<b>Conclusion</b>	<i>Endings: Policeman told her not to get lost again AND/OR Policeman drove away OR good alternative, e.g., "mother said she wouldn't get lost again."</i>

# Analysis

## **Our questions:**

- MLU
- Grammatical accuracy  
/errors
- Story comprehension
- Story quality

 Measures based on C&I Verbal Utts: Syntax/Morphology and Semantics sections  
 All other measures based on total utterances  
 Database selection criteria: Age +/- 6 months (5;4 - 6;4)

### Compared to his peers:

- Fewer utterances (Total Utterances)
- Low Oral Narrative Quality
- Low Comprehension
- Fewer utterances with verbs
- Low number of total words
- Low rate
- Low grammatical accuracy
- High number of errors

### Relative strengths:

- MLU
- Number of Different Words (Semantics)
- Low mazing behaviour (no mazes!)

# You can also create a performance report

## Performance Report

Hugo

Age: 5;10

### Language Sample Analysis with SALT Software

#### Elicitation Task and Database Overview

Hugo completed a narrative story retell of 'Ana gets lost' (Swan, 1992). He listened to the story once and was then asked 8 comprehension questions. He listened to the story a second time and then retold the story using his own words, without the use of the pictures. Measures of sample length, intelligibility, narrative quality, comprehension, syntax/morphology, semantics, verbal facility, and errors were calculated from his language sample and compared with samples from 110 speakers completing the same task. These speakers were within 6 months of Hugo's age. Although most measures were calculated from the entire sample, a few measures, such as total pause time and number of errors, can be affected by different sample lengths, i.e., the longer the sample, the more opportunity to produce them. For these measures, Hugo's sample was compared with a subset of 97 samples matched in length by the same number of words. All measures were interpreted using a standard deviation interval of 1.00 SD.

#### Transcript Length

Hugo produced 7 utterances using a total of 45 words, which were both less than his database peers completing the same task. His number of utterances and words were 1.21 SD lower and 1.24 SD lower, respectively, than the database mean. He took 1 minute and 20 seconds to complete this task, which was within normal limits.

#### Intelligibility

Hugo's sample was 100% intelligible.

## Errors

85.7% of Hugo's utterances contained errors, which was more than 3 SD higher than the database mean. His sample contained the following extraneous words: HIM[EW] twice, HIS[EW] once, and TAKE[EW] once. His sample also contained the following 3 utterance-level errors:

- C Anna was go/ing out of the door [eu].
- C And the police pat on his[ew] back [eu].
- C And the policeman said you don't have to go out of ever again [eu].

This can be edited in Word.

But – I can transcribe and analyse 7 utterances by hand!

- That is a very short sample!!
- 50 utterances for more detailed linguistic analysis.
- This may depend on your findings from the narrative transcript analysis
- With Hugo, we also elicited personal narratives - 59 utterances, of which 17 were incomplete/unintelligible.
- And compared this to a SALT database.

WAIT...  
WHAT?

# Future plans

- Benchmark /reference data sets are super useful (see also Leitao et al., 2025 – Peter & the Cat [5;0 – 7;11])
- Integrating them into SALT makes it easier to compare a child's performance to their peers.
- Assistance with creating reference datasets would be super helpful.
  - E.g., Global TALES for adults!!

# Future plans

- Pinches of SALT – short bite-size videos to cover the basics
  - Communication units
  - Coding for bound morphemes
  - Suggestions!!
- What (else) can I do to make language sampling and analysis more doable?

# Questions/comments

You will receive an email with a link to the recording + slides
